

INSTALLATION — HULL SKIRTS

The Hull Skirt has two sections, port and starboard. The skirt is designed to be installed **BEFORE** the Winter Cover. The Winter Cover will overlap the top of the skirt.

(1) Attach the Skirt Sections to the Stanchion Bases:

Spread the skirt out starting at the bow. Use the buckles to secure the skirt to the base of the rails.

(2) Secure the Middle:

Tie a line to a loop side to side under the hull near midship to secure the skirt position.

(3) Secure the Bow:

Lace line through the loops to secure the skirts and enclose the bow.

(4) Secure the Transom:

Lace line through the loops to secure the skirts and wrap the edge of the transom.

(5) Finish Securing the Skirts:

Work your way around the boat. Tie the lines from the loops under the hull or to the cradle. Tighten securely.

(6) Install Winter Cover:

Once the skirt is secured to the boat, proceed with installation of the winter cover.
